

ShowerKing installation guidelines

Boasting more than 20 years' experience in the industry, ShowerKing Ltd has become a nationally trusted manufacturer and professional shower installer. It's the decades of experience that has taught the ShowerKing team many tricks and techniques to getting that perfect finish each and every time. Below are some of the most common issues seen by our installers from job to job that prevent the correct installation of the shower unit or other work scheduled for completion. They are listed in 'most common' order, #1 being the most common.

- 1. Gib stopping/plaster & paint inside the area of which the acrylic liner will be glued to** – *Apart from the manufacturers of the adhesive specifying no plaster or paint, ShowerKing believes that plaster and paint behind an acrylic shower liner is the leading cause to 'popping' shower liners. ShowerKing requires no more than 100mm of plaster or paint to intrude into the area where the liner is to be glued.*
- 2. Finding damaged, incorrect or absent product (shower in subject) and parts to be installed by ShowerKing upon arrival to site** – *It's not ShowerKings responsibility to check the supplied products! Check the products delivered to site BEFORE ShowerKing arrives. Ensure it's all there, correct and in good condition. So much time and expense waiting for re-delivery!*
- 3. Out of level tray and out of plumb walls** – *As per manufacturers specs, all trays must be level and walls to be plumb and have a stud each edge of the tray for shower surround fixing.*

4. Other trades people being in the area ShowerKing requires to carry out works – *With the nature of our work, manoeuvring glass etc, ShowerKing requires the bathrooms to be free of other trades people, equipment or products to ensure a safe easy installation of the shower. Also, new work such as painting or tiling carried out the same day prior to ShowerKings arrival would prevent access to the bathroom.*

5. Access to the house/bathroom – Arrangements will be made prior to scheduling regarding ShowerKings access to the appropriate places. Sometimes this requires meeting a 2nd party or keys being left out for ShowerKing. Failure to comply with arrangements will mean no work done and extra charges incurred.

Condition of products – However not usually a common issue, if repeat work is carried out by ShowerKing on one site, cleaning products ready for install can be a lengthy delay for our installers! Care and thought by the sender (manufacturer or merchant) on how the products are sent is required and storing thereafter.

Disposal of packaging of client supplied shower – As part of ShowerKings installation service, we unpack the shower parts and repack the packaging back into their boxes. ShowerKing then dispose of the rubbish in the sites supplied rubbish bins *provided* the bins are not more than 60 meters away from the lot or that they are not too full to safely put the rubbish in. In the event of these two scenarios, packaging will be neatly left inside the house.

These requirements are outlined in detail with an effort to PREVENT any problems with completing works. ShowerKing aim to have a healthy relationship with our clients and this guideline will help you get ShowerKing to your job on time, professionally, every time & with a smile!
